

State- and federally-funded early childhood opportunities serve more than 11,282 children and families in New Hampshire.¹

High-quality early childhood education (ECE) is proven to dramatically improve a child's opportunities for a better future - particularly children from low-income families - while offering parents improved job stability and overall economic security. Research has shown an annual 13% return on investment per child through better education, economic, health, and social outcomes.

Much of the progress at the state and local level has been made possible by strong partnerships with the federal government aimed at expanding access and increasing quality for more children. Many state and community programs are funded exclusively with federal dollars, while others leverage federal funding to offer high-quality early learning and care opportunities beyond what is possible with state funding alone.

At current funding levels, however, these programs reach only a fraction of the population they are intended to serve. A significant, sustained federal investment is needed to build a system of care that ensures all working families who need it can access affordable, high-quality options that work for them.

The COVID-19 pandemic demonstrated both the essential role of the early learning sector and the critical need for federal support to sustain it. [The Child Care and Development Block Grant \(CCDBG\)](#), for example, was key to providing relief to child care providers and ensuring access to care for thousands of working families. States have discretion and [varying timelines](#) for spending and reporting on the use of these funds. Consequently, that information is not included here.

NEW HAMPSHIRE QUICK FACTS

Population Under Six²	73,712
Under Six Living in Poverty³	13.85%
Children Enrolled in Head Start⁴	1,178
Eligible Children Served by Head Start⁵	24.55%
Children Enrolled in Early Head Start⁶	385
Eligible Children Served by Early Head Start⁷	5.59%
Children Under Six Served by CCDBG and Mandatory Funds⁸	3,465
Eligible Children Under Six Served by CCDBG and Mandatory Funds⁹	11.10%
Families Served by the Maternal, Infant, and Early Childhood Home Visiting Program (MIECHV)¹⁰	340
Children Served by the Individuals with Disabilities Education Act (IDEA) Part C¹¹	2,105
Children Served by IDEA Part B, Sec. 619¹²	3,809

Early Childhood Education and the New Hampshire Economy

74%
OF CHILDREN UNDER SIX

In New Hampshire, 74% of children under six have all available parents in the workforce.²²

13%
OF THREE AND FOUR YEAR OLDS

13% of three- and four-year-old children attend public ECE.²³

In addition to the significant impact of early childhood education on children and families in the short and long term, early learning and care can have an immediate impact on state economies. Access to affordable child care can increase labor force participation and support parents seeking additional education and training, which contributes to higher earnings over an individual's lifetime.

In New Hampshire, the child care industry has an estimated economic impact of \$394 million, including revenue generated by child care providers and spillover or related productivity in other sectors.²⁴

An estimated 8,767 jobs are sustained by the child care sector.²⁵

Lack Of Supply and the High Cost of Care Challenging for Working Families

Limited access to high-quality child care presents a tremendous challenge for working families, and too often, the care that is available costs more than families can afford.

46%
OF RESIDENTS

46% of New Hampshire residents live in a "child care desert."²⁶

\$13,355

\$13,355 is the average annual cost of center-based infant care,²⁷ 12% of the state median income.²⁸

\$9,597

\$9,597 is the average annual cost of home-based infant care.²⁹

The pandemic only exacerbated these long-standing issues as many providers, who under normal circumstances operated on razor-thin margins, were forced to close in the face of increased costs and declining revenue. Prior to the pandemic, 160,000 openings for child care workers were projected annually, and between February 2020 and June 2021, an additional 115,000 child care sector jobs were lost and still have not been recovered.
